

Legacy fuel-to-mode compatibility

Eligibility derived from the compiled legacy SQLite, including blends and charging

Technology family	Tech. count	Gasoline blend	Diesel blend	CNG	LNG	Jet fuels	Marine oils	Electricity	Hydrogen
Motorcycles	3	●						●	
Cars	16	●	●	●				●	●
Passenger light trucks	16	●	●	●				●	●
Freight light trucks	15	●	●	●				●	●
Medium trucks	9	●	●					●	●
Heavy trucks	7		●					●	●
School buses	11	●	●	●				●	●
Transit buses	12	●	●	●				●	●
Intercity buses	7	●	●					●	●
Jet aircraft	6					●			
Rail	7		●		●				●
Marine vessels	5				●		●		
Off-road	1		●						

● At least one technology uses this carrier; an empty cell has no such represented path.

PHEVs mark both liquid fuel and electricity. Hydrogen is classified at vehicle input, irrespective of production route.

Counts include existing/new and range variants; charging, blending and supply technologies are counted separately.

Off-road is represented as diesel energy demand (PJ), rather than passenger-km or tonne-km.
